About

The primary purpose of the study is to determine the feasibility of realigning the US 301/US 98/Clinton Avenue intersection and identify suitable improvement alternatives that will:

- Eliminate the current intersection offset of US 301, US 98, and Clinton Avenue;
- Facilitate east/west travel and enhance safety near the US 301/US 98/Clinton Avenue intersection; and
- Maximize the benefits of other area improvements currently underway.
